## 2019 AMERICAN ARCHITECTURE AWARDS

Add One

The American Architecture Awards are the nation's highest public awards given by a non-commercial, non-trade affiliated, public arts, culture, and educational institution.

This year's American Architecture Awards went to exceptional buildings designed for every stage of our lives: skyscrapers, corporate headquarters, governmental buildings, science and technology centers, transportation centers, airports, hotels, parks, pavilions, restorations and renovations, retail facilities, housing projects, private homes, schools, universities, art, cultural and health buildings, urban planning and landscape architecture, interiors, and other humanitarian and educational initiatives.

"For 25 years, The American Architecture Awards have presented stunning and meticulously-designed projects that demonstrate quality architecture in the service of clients, as well as the general public, no matter the scale of project," states Christian Narkiewicz-Laine, Museum President, The Chicago Athenaeum.

"In a matter of 25 years, this program has become the single, most important recognition for Design Excellence in the United States, honoring known and celebrated firms, as well as young upstart offices for their smaller scaled, more challenging projects."

"This year, the selected firms for these awards have demonstrated their ultimate commitment to bring their expertise and the quality of life that Design Excellence facilitates to projects throughout their regions and beyond."

'Winners include what the public has come to identify as 'architecture' in the private and public realm, be it a single-family home or an entire city.'

"Innovative or aspirational treatments of the building typology; exquisite expressions of modern design; and forward leaning and progressive design ideas are all expressed this year, across many different scales and regions from skyscrapers in New York to a rural retreat in remote Wisconsin."

"The awarded buildings have earned their well-deserved recognition, taking some of the most energy intensive and technologically challenging building types to new and higher levels of design and integrated performance."

"These practices have prioritized the fusion of design and performance, believing that beautiful buildings simply perform beautifully."
